FAQs

WHAT ARE SETUP CHARGES?

Setup charges are the fees associated with the time it takes to prepare the art for production.

IS THERE A SETUP CHARGE?

Yes, there is a setup charge on all first time orders for imprinted items.

WHAT IS THE COST?

Pricing is quoted by our Customer Support team. Your artwork may be required for proper quoting, Please reach out to orders@ergodyne.com for quotes on artwork fees and set-up charges.

HOW LONG DOES THE PROCESS TAKE?

Embroidery and screen printing orders have a standard 3 week lead time from approval. Heat transfer orders are 2 weeks for the initial order while repeat transfer orders are 1 week.

CAN I PAY A FEE TO HAVE MY ORDER FASTER?

Ergodyne does not offer an expedited order production option. However, you are able to indicate expedited freight for a quicker order arrival.

WHAT ARE YOUR ARTWORK REQUIREMENTS?

- Vector art or high resolution art (300DPI (dots per inch) at 5". Acceptable Formats: Adobe Creative Suite (CC) Illustrator (.ai), Photoshop (.psd), InDesign (.indd) & Acrobat (.pdf) files. Please make sure all file formats are editable and include all supporting documents and links. Avoid embedding images or sending flattened pdf documents.
- Fonts: All fonts should be converted to outlines. If editing of text is needed, please make sure to furnish all fonts with your files.
- Vector Art vs. Raster Art: Vector Art (Line Art) should be supplied whenever possible. This allows best resolution of graphics regardless of scaling or size. Raster Art (Photographic) is resolution dependent and should be supplied at a minimum resolution of 75ppi @ final size. (NOTE: Consideration of final resolution must be considered when building scaled art files)

- Color Matching: Colors should always be built using the Pantone Color Library with PMS number call outs for color. This should be consistent throughout the file(s) to assure proper color accuracy and matching.
- Cut Paths: Any graphics that require cut-to-shape or contour cutting should include a "Cut Path". This vector path should be on its own layer and should be one continuous path (not segmented).
- Graphics with Bleed: Supplied art files should include a minimum ¼" (.250") bleed—larger whenever possible.
- Quality in – Quality Out: The quality of the art files received has a direct impact on the quality of the printing and final graphics. If ever in question, please do not hesitate to call for help or clarification.

WHAT IS HIGH RESOLUTION ART?

A "dot" (also known as a "pixel") describes the number of discrete points that can be captured by digital cameras. "Dots per inch" (dpi) measures the density of the image when printed. Long story short - 300DPI is considered to be high resolution art and it needs to be that or higher to be up to snuff on each product.

ARE THERE ANY ARTWORK RESTRICTIONS?

Yes, we reserve the right to decline design submissions we deem offensive or infringe on any intellectual property or third party rights.

CAN I SEE A SAMPLE OF WHAT THE PRODUCT WILL LOOK LIKE?

A digital mock-up of what the finished product will look like will be sent for approval and sign off before proceeding with the initial order.

WHAT IS THE MOQ?

MOQ = minimum order requirement. The minimum order requirement varies based on product and process. For example, high-visibility heat transfers and embroidered hat orders have an MOQ of 12. Can mix and match sizes/ colors to meet the 12 piece requirement.

IS IT POSSIBLE TO MAKE CHANGES TO MY ORDER AFTER I EMAIL MY PURCHASE ORDER TO THE ORDERS DEPARTMENT?

Once production starts, we are unable to make changes to your order.
